

SUBASH SUNUWAR

AI Engineer | LLM & Automation Specialist | Data Scientist

+44 7503 576160 | ssunuwar33@gmail.com | linkedin.com/in/subashsunuwar33 | github.com/ssunuwar33

PROFESSIONAL SUMMARY

AI Engineer and Automation Specialist with an MSc in Data Science (University of Greenwich, Merit) and practical experience building end-to-end machine learning pipelines, deploying Large Language Model (LLM)-powered applications, and engineering scalable data pipelines and workflow automation systems. Proficient in Python, TensorFlow, OpenCV, N8N, and Zapier, with hands-on exposure to REST APIs, model deployment, and Natural Language Processing (NLP). Demonstrated track record of reducing operational overhead by up to 90% through production-level AI and automation solutions. Seeking to apply deep technical expertise in machine learning, LLM integration, and data engineering to deliver measurable business impact.

RELEVANT INDUSTRY EXPERIENCE

AI Engineer Intern | Bizzed AI | Remote / UK

Mar 2026 – Present

- Designed and deployed an end-to-end lead-response automation pipeline integrating Zapier with the Meta (Facebook) Ads API, triggering instant outbound calls to inbound leads and reducing average response time from several hours to under 60 seconds — directly increasing lead conversion opportunity.
- Built a scalable Notion Customer Relationship Management (CRM)-to-Slack notification system via Zapier that monitors pending task queues and delivers targeted real-time alerts to stakeholders, reducing missed task reviews by an estimated 90% and eliminating manual follow-up overhead.
- Collaborated on a production computer vision facial recognition system using OpenCV and deep learning models, engineering a data pipeline that cross-references live video feeds against a CRM database — architected for smart-glass integration to enable real-time contact identification at scale.
- Developed and deployed a Claude API-powered AI productivity plugin automating administrative workflows across Gmail and Google Calendar, including email drafting, meeting scheduling, and proposal generation via REST APIs — compressing routine task completion time to under 10 minutes.

AI Automation Developer | Independent Project | Remote

Nov 2025 – Nov 2025

- Architected and deployed an end-to-end job application tracking system using N8N workflow automation and Google Gemini LLM, applying Natural Language Processing (NLP) to classify inbound emails and extract structured entities from unstructured text — reducing manual data-entry effort by approximately 80%.
- Engineered an LLM-driven data pipeline that ingested, parsed, and stored structured application data into a centralised database via REST API, improving downstream data accuracy and enabling consistent follow-up workflows. (github.com/ssunuwar33)

ADDITIONAL PROFESSIONAL EXPERIENCE

Customer and Operations Assistant | Tesco | London, UK

Jan 2023 – Present

- Managed high-throughput service delivery to 100+ customers per shift, consistently resolving queries and complaints to maintain satisfaction targets — building stakeholder communication and problem-resolution skills directly applicable to client-facing technical delivery.
- Led a team of up to 10 staff across peak trading periods, coordinating task allocation and performance against operational KPIs, demonstrating cross-functional team leadership and process management.

IT Support Specialist | Aarambha Infosys | Kathmandu, Nepal

Aug 2018 – Jan 2021

- Delivered Tier-1 technical support across hardware, software, and network infrastructure (LAN/WAN, Wi-Fi, VPN), diagnosing and resolving incidents to minimise downtime and maintain SLA compliance.
- Administered Windows Server environments, Microsoft 365, and Active Directory — provisioning user accounts, enforcing access controls, and deploying patch management and antivirus policies to strengthen security posture.
- Reduced recurring support tickets by implementing structured end-user training programmes and maintaining a centralised incident log via a helpdesk ticketing system, improving first-contact resolution rates.

PROJECT EXPERIENCE

Real-World Human Crime Detection and Notification System

Mar 2024 – Aug 2024

- Designed and trained a real-time AI surveillance model using Convolutional Neural Network (CNN) architecture (MobileNetV2) combined with Gated Recurrent Unit (GRU) sequence modelling, deploying OpenCV for video frame extraction and preprocessing to achieve accurate crime-event classification from live streams.
- Improved model generalisation on sequential video data by implementing GRU layers with dropout regularisation, reducing overfitting and enhancing temporal activity recognition across varied scenarios.
- Deployed an automated alert dispatch system that triggers notifications upon detecting suspicious activity, reducing dependence on manual monitoring and improving incident response time.

EDUCATION

MSc Data Science | University of Greenwich | London, UK

Sep 2023 – Oct 2024

Grade: Merit | Key Modules: Data Visualisation, Big Data, Machine Learning, Graph and Modern Databases

BE Computer Engineering | University of Greenwich | London, UK

Sep 2016 – Mar 2022

GPA: 3.19 | Key Modules: Data Structures and Algorithms, Artificial Intelligence, Database Management Systems, Computer Architecture

CERTIFICATIONS AND TRAINING

Data Scientist Associate — DataCamp | Jan 2026 – Jan 2028

TECHNICAL SKILLS

Programming: Python, Java (Spring Boot, Swing), R, HTML, CSS, Bootstrap, SQL

Machine Learning: TensorFlow, Keras, Scikit-learn, CNN, GRU, LSTM, Computer Vision, OpenCV, Model Training, Model Deployment, Model Evaluation (F1-score, AUC-ROC), NumPy, Pandas

LLMs and AI: Large Language Models (LLMs), Claude API (Anthropic), Google Gemini, Prompt Engineering, LLM Integration, RAG Pipelines, Natural Language Processing (NLP), AI Agent Development

Automation: N8N, Zapier, Meta Ads API, Gmail API, Google Calendar API, Google Workspace Automation, Workflow Orchestration

Data Engineering: Data Pipelines, MySQL, Graph Databases, Jupyter Notebooks, Big Data, ETL Processes, Structured Data Extraction

Tools and Platforms: REST APIs, Git, Docker (familiar), AWS/GCP (familiar), Active Directory, Microsoft 365, Windows Server, Helpdesk Systems, Notion CRM

Languages: English (Fluent), Hindi (Fluent), Nepali (Native)
